	Back (Answer + WHY + Memory Cue + Cross-Ref)
act insights from large volumes of unstructured data (like PDFs and images)?	Knowledge Mining. WHY: Combines Azure Cognitive Search with AI enrichment to make unstructured data searchable. Memory Cue: 'Mining = digging insights out of a mountain of data.' See also: Card 5 – Cognitive Search vs Knowledge Mining.
ons for unusual behavior. Which AI workload should they use?	Anomaly Detection. WHY: Identifies outliers and deviations in time-series or event-based data. Memory Cue: 'Anomaly = abnormal blip in the pattern.' See also: Card 7 – Use cases for Anomaly Detection.
sentiment from customer reviews. Which AI workload applies?	Natural Language Processing (NLP). WHY: NLP allows systems to analyze and understand human language for tasks like sentiment analysis and key phrase extraction. Memory Cue: 'NLP = makes sense of words.' See also: Card 12 – Language Service features.
e classifying objects in photos or detecting faces?	Computer Vision. WHY: Enables AI to process and analyze images for tagging, object detection, OCR, and more. Memory Cue: 'Vision = seeing and understanding images.' See also: Card 14 – Computer Vision vs Custom Vision.

ems treat all users fairly, avoiding discrimination in decisions.	Fairness WHY: Ensures AI models do not propagate or amplify bias based on gender, ethnicity, or other factors. Memory Cue: 'Fair play for all.' See also: Card 20 – Fairness vs Inclusiveness.
tems protect patient confidentiality. Which principle applies?	Privacy and Security WHY: Protects personal data and ensures ethical data use. Memory Cue: 'Privacy = protect the person.' See also: Card 22 – Privacy in healthcare AI.
users understand how their AI system works and its limitations.	Transparency WHY: Makes AI systems understandable and their purpose and constraints clear. Memory Cue: 'Transparency = nothing hidden.' See also: Card 25 – Transparency vs Accountability.
ees to monitor AI deployments for ethical and legal compliance.	Accountability WHY: Ensures governance structures are in place to make AI traceable and answerable. Memory Cue: 'Accountable AI = someone's responsible.' See also: Card 28 – Governance frameworks.
ensure it benefits all demographics equally. Which principle applies?	Inclusiveness WHY: Ensures AI benefits reach all users, regardless of background. Memory Cue: 'Inclusiveness = all welcome.' See also: Card 20 – Fairness vs Inclusiveness.

s autonomous vehicles don’t malfunction in unpredictable conditions.	Reliability and Safety Reliability and Safety. Which principle? WHY: AI must function consistently under expected and unexpected scenarios. Memory Cue: 'Reliable = safe to trust.' See also: Card 30 – Safety testing in AI systems.
in Responsible AI?	Fairness focuses on removing bias from AI outputs (e.g., loan approvals), while Inclusiveness ensures AI solutions benefit all societal Memory Cue: 'Fair = no bias, Inclusive = everyone gains.' See also: Card 5 – Responsible AI overview.
ability?	Transparency ensures users understand how an AI works. Accountability ensures there is governance and oversight for AI’s operation Memory Cue: 'Transparency = clarity, Accountability = responsibility.' See also: Card 28 – Governance frameworks.
