Dear Oracle Health & Analytics Team,

I am thrilled to apply for the Software Engineering Intern role (Summer 2026) as a Computer Science student expected to graduate from the University of Missouri - Kansas City in Spring of 2028.

The internship represents an ideal opportunity to learn and grow as an engineer, and the chance to work for a company I admire is a career milestone I would be deeply proud of. This role aligns naturally with my intrinsic passion for building technologies that enhance personal health, which I am currently exploring as I architect a workout builder and tracker. I would be excited to bring a builder's mindset and an entrepreneurial spirit to your team.

Here's how my coursework and projects align with the technical requirements of this internship:

Python Development: I have completed UMKC's Python Programming coursework and built multiple applications in Python, including a Video Game Transaction Analyzer, an OOP Theater Booking System, and others. I engineered these tools to handle large datasets, manage program states, and ensure data integrity.

System Design & Algorithms: For the Spring 2026 semester, I am learning abstract data structures, algorithmic efficiency, and discrete structures to deepen my understanding of algorithmic complexity. Additionally, my workout builder and tracker project demonstrates my ability to model complex domains using object-oriented programming, with a focus on modular design and persistent storage.

AI Proficiency: I am proactive in adapting to the future of engineering. I earned a certification in Microsoft Azure AI Fundamentals and actively experiment with tools such as Hugging Face, OpenAI, and Google Antigravity to learn how to build and integrate intelligent features.

Professional Reliability: While I am a student, I have 10 years of prior entrepreneurial experience that has honed my problem-solving skills and equipped me to navigate a fast-paced, creative environment immediately.

My most important skills are the ability to learn and adapt quickly, a profound work ethic, and a passion for working with others to overcome complex challenges. It would be an honor to contribute these as a team member in the Health & Analytics program. Thank you for your time and consideration.

Respectfully,
Tyler Prince
