Office of Strategic Initiatives
University of Missouri-Kansas City

May 29, 2025

Dear Hiring Department,

I'm a Computer Science student at UMKC with over a decade of real-world experience designing and building digital systems that solve practical problems. As a current student, I have a deep connection to the university and a clear understanding of the importance of presenting UMKC's identity professionally, clearly, and cohesively across digital platforms.

I've launched websites for service businesses and startups using self-taught front-end skills and digital marketing strategies. I led layout, branding, and user experience independently, often starting from little more than a client's rough idea or verbal goal. This blend of creative execution and technical delivery is why I'm drawn to this role.

Much of my work involves translating ambiguity into clarity. I take unstructured input and produce complete, responsive, accessible websites that reflect a consistent visual identity. I apply design heuristics, color psychology, and layout principles to create user-centered interfaces. Both performance goals and the emotional tone of the brand shape my builds. I also write UX copy, configure SEO and analytics, and use behavior-tracking tools like Hotjar to fine-tune conversion flows.

I am developing a self-booking scheduling app using React and the Google Calendar API. I use ChatGPT as a build partner to quickly accelerate learning and prototype features. The same attention I give to component structure, spacing, and mobile responsiveness carries through every project, whether I am designing a homepage, contact form, or whole site architecture.

What excites me most about this opportunity is the chance to contribute directly to the university that has invested in my education. I understand the balance between flexibility and brand

consistency across UMKC’s platforms, and I would be proud to support that mission from the inside.
