ULA Software Engineering Recruiting Team
RE: Summer 2026 Software Engineer Internship

Dear ULA Software Engineering Recruiting Team,

I am a sophomore in the Computer Science program at the University of Missouri-Kansas City with a 3.82 GPA. I am thrilled to apply for the software engineering internship because it represents an incredible opportunity to learn from the world's most reliable space launch company, with over 150 consecutive successful launches. Contributing to missions that save lives, explore the universe, and connect the world would be a life and career milestone I would take great pride in.

Here's how my coursework and prior experience align with the preferred skills and knowledge for the internship:

Experience with software development and engineering lifecycles: I am proficient in Python and actively developing skills in C++ through current coursework at UMKC. I have completed course-related projects, including an object-oriented Movie Theatre Booking System, a Video Game Transaction Analyzer, and a Workout Builder & Tracker. These projects provided hands-on experience in enumerating software requirements, implementing error-handling and input validation logic, and unit testing.

Foundations in low-level systems: In the upcoming Spring 2026 semester, my studies will focus on memory management, pointer logic, algorithmic efficiency, and computer architecture. The coursework will provide the necessary foundation for working with the engineering simulation environments and embedded launch vehicle flight controls that ULA manages.

Effective communication and collaboration in "United Team" settings: I served as a volunteer community organizer for 1 Million Cups Kansas City, where I coordinated weekly events for a national startup community and facilitated cross-functional collaborations. Additionally, I founded and managed a freelance web development consultancy and a successful window cleaning business. These roles required me to take initiative, manage complex logistics in high-stakes environments, and maintain clear communication with diverse teams.

My most important and valuable skills are a deep desire to learn and the ability to learn quickly, a profound work ethic, and a passion for working with others to accomplish incredible things. I believe these skills would be a good fit for ULA's culture. It would be an honor to participate in the Summer 2026 internship and contribute to the mission-critical software that will elevate humanity. Thank you for your time and consideration.

Respectfully,
Tyler Prince
