PROFESSIONAL SUMMARY

Product-minded technologist with 10+ years of end-to-end ownership, from stakeholder discovery and requirements definition through scoping, prioritization, and delivery. Applies AI tools and agentic workflows daily to accelerate decision-making and drive data-informed outcomes. Currently completing a B.S. in Computer Science (Honors, GPA 3.8) at UMKC with hands-on work in ML, NLP, and AI systems.

EDUCATION

University of Missouri - Kansas City
Bachelor of Science in Computer Science. Honors Program. GPA: 3.8.
Relevant Coursework: Python and Java Programming, Discrete Structures, Physics, Calculus, AI Fundamentals, Data Fundamentals

EXPERIENCE

Owner / Founder 2014 – Present
Prince Professional Window Cleaning LLC

- Built and scaled a seasonal post-construction and commercial business from cold outreach to a peak of 988 clients and roughly $409K in revenue in a single operating season, winning contracts with private schools, luxury apartment complexes, hotels, and corporate campuses across Kansas City.
- Ran client discovery directly, meeting prospects to understand their needs and objectives, then scoped and prioritized work to deliver against them under real time and resource constraints.
- Led and coordinated a team of up to 3 technicians, managing logistics, sequencing, and quality in high-stakes environments to secure repeat business.
- Transitioned the business to a streamlined repeat-client model to focus on a Computer Science degree and product career, demonstrating deliberate prioritization across competing commitments.

Freelance Web Developer 2016 – 2024
Reach Digital Positioning

- Delivered custom websites and digital solutions for early-stage startups and local businesses, owning projects from requirements gathering and scoping through launch and iteration.
- Worked directly with founders and stakeholders to translate business goals into technical requirements, balancing functionality, usability, performance, and timeline in short iterative cycles.
- Improved discoverability and performance through technical SEO, analytics integration, content architecture, and data-informed iteration.

Community Organizer 2016 – 2020
1 Million Cups Kansas City

- Organized and emceed weekly startup events connecting founders, investors, and community leaders across Kansas City.
- Coordinated logistics, presenter preparation, and stakeholder communication to ensure smooth execution.
- Coached founders in refining messaging and presenting ideas clearly to diverse audiences.

PROJECTS

Network Intrusion Detection System github.com/Tjprimc09/NIDD
Python, Scikit-learn, XGBoost, React, Vite

- Built a two-stage detection architecture: an Isolation Forest for unsupervised anomaly detection paired with an XGBoost classifier using ADASYN to address severe class imbalance in network attack data.
- Developed the training pipeline on the KDD dataset: preprocessed mixed traffic features with scaling and one-hot encoding, mapped raw attack labels into broader intrusion categories, and removed leakage-prone fields before training.
- Benchmarked logistic regression, random forest, and a neural network with grid search and 5-fold cross-validation in an earlier version; identified class imbalance as the core failure mode and redesigned the architecture to solve it.
- Structured as separate backend and frontend applications, with a React/Vite dashboard integrated for monitoring and visualization.

Patient Queue Management System github.com/Tjprimc09
Java

- Built a multi-department patient management system using a custom queue class that extends a provided abstract base, backed by an ArrayList with priority insertion so critical patients are served ahead of regular ones while preserving first-in-first-out order within each tier.
- Implemented a CSV intake pipeline with field validation and error logging, routing each record to the correct clinic queue and enforcing capacity limits.

- Designed a two-tier menu interface for admitting, treating, cancelling, and searching patients across three clinics, with transaction logs grouped by clinic and an end-of-day export of remaining patients to a reschedule file.

CERTIFICATIONS

- Microsoft Certified: Azure AI Fundamentals (2025)
- Unsupervised ML: Network Modeling and Clustering
- Introduction to AI/ML/LLMs

SKILLS

AI & Product Workflows: LLM-assisted requirements drafting, agentic development frameworks, Copilot CLI, prompt design, data-informed decision-making, ML workflows, NLP preprocessing, clustering, deep learning fundamentals, MLOps

Languages: Python, Java, HTML, CSS, SQL

Tools & Methods: Git/GitHub, Agile/iterative backlog and sprint workflows, VS Code, Jupyter, MLflow, AWS, Azure, Hugging Face, OpenAI

ACTIVITIES & PROGRAMS

- "Roo" Hackathon (Fall 2025)
- APEX: AI-Prepared Experiential Credential: AI/ML/LLMs, unsupervised learning, NLP, deep learning, and cloud deployment for AI apps.
- Center of Excellence in Data Science and AI, AI-Empowered Spatial Computing: spatial data lifecycle, spatial data science in Python, Unity for AR/VR, and spatial/geostatistical analysis.
