Dear Hiring Manager,

I am a 4.0 GPA computer-science student at the University of Missouri–Kansas City and hold Microsoft's AI-900 and DB-900 certifications, giving me a solid foundation in Azure AI and data services. Infosys's mission to "amplify human potential and create the next opportunity for people, businesses and communities" and its values of client service, integrity, and continuous improvement are ideals I want to support.

Over the last year I've been developing a resume-tailoring platform that solves a pain point I have as a job seeker. The system ingests job descriptions and resumes, extracts key details, and produces tailored documents. The project uses React for the front-end and combines Azure OpenAI, Cognitive Search, Azure Data Lake, Cosmos DB and Python on the back end. I designed the data pipeline and retrieval-augmented search workflow, built schema-based parsers to transform semi-structured text into queryable data, and wrote Python and SQL code that runs on Azure Functions.

I have a long history of using technology to build and grow small businesses. I founded a window-cleaning service and expanded it into commercial markets, building the website, automating marketing, and using digital tools to manage operations and customer scheduling. I also ran a digital-marketing consultancy that delivered web design, SEO and analytics services for other founders. When generative AI became accessible, I began creating custom systems to address my own business and personal challenges. For example, I built a React scheduling application integrated with the Google Calendar API and designed an AI advisory concept using multiple agents. These projects grew naturally from the skills I developed while helping clients and running my own company.

Infosys's inclusive culture and emphasis on innovation offer an ideal environment for me to deepen my expertise and contribute to meaningful projects.

Thank you for considering my application. I welcome the opportunity to discuss how my skills can contribute to the data initiatives at Infosys.

Sincerely,

Tyler Prince
