Dear Hiring Manager,

I am excited to apply for the Jr. Data Engineer position in Dallas and confident that my hands-on experience aligns with your needs. In my ResumAI project, I architected a modular, enterprise-style ELT pipeline integrating Azure Functions, Data Lake Storage Gen2, Cosmos DB, Azure OpenAI, and Cognitive Search to process resume and job data at scale . I used Python and SQL scripting to automate data ingestion, transformation, and storage, delivering maintainable, query-ready datasets.

Your focus on scalable data pipelines and advanced feature engineering resonates with my core skills. I have built both batch and streaming ingestion frameworks, applied feature selection techniques, and designed schema-based parsing workflows. My toolkit includes Python, JavaScript, SQL; relational databases (MariaDB, PostgreSQL, Azure SQL); NoSQL stores (MongoDB, Cosmos DB, DynamoDB); and Azure Synapse, Data Lake Storage, Databricks, Delta Lake, and Data Factory for ETL and ELT . I am prepared to leverage these methods to ensure data quality, performance, and cost efficiency.

I thrive on learning new technologies and collaborating with experienced teams to deliver data-driven solutions. As a 4.0 Computer Science student at UMKC with AI-900 and DB-900 certifications, I bring a strong technical foundation and a proactive mindset toward mastering your toolset, including Kafka, Databricks, Vertex AI, or your in-house platforms . Thank you for considering my application. I look forward to contributing to your organization s data initiatives and growing alongside your team.

Sincerely,

Tyler Prince
